

# MAMIYA 645 PRO TL 'PRO' KIT

Mamiya are pleased to announce the new Pro TL Pro kit. This new outfit brings together the most popular components into one special package. This 645 Pro TL System is renowned for providing photographers with every component needed to tailor a camera outfit perfectly to suit the requirements of the job and is used by a wide range of photographers, from wildlife to adventure.

Martin Hartley an accomplished adventure photographer, has taken photographs in every environment and on every continent on earth. From the high humidity found in the tropical rainforest to the Siberian Arctic. He maintains "Always I return with the shots I go looking for, no matter what Mother Nature throws at me. If there is such a thing as the landrover of cameras this is it".

In contrast to Martin, Robert Thompson is an accomplished Natural History photographer and he depends upon his camera to capture subjects in the greatest detail. Robert makes the Mamiya 645 Pro TL his camera of choice when photographing the beautiful detail of amazing creatures.

Mamiya has taken on board the needs of the photographer and compiled the value 'Pro' kit. This kit consists of all the equipment needed by today's professional or enthusiast photographers at a special low price. As well as the 645 Pro TL body the kit also includes the following features.

120 Roll Film Holder - Mamiya film holders permit fast interchange, even partway through a roll, the film holder can be interchanged with another for quick and easy film or format changes. These film holders are designed to make film loading and replacements simple and smooth. Other features include a dark slide, a darkslide storage slot, film speed dial and memo clip.

Power Drive Grip – Lightweight, compact and quiet, the WG402 Power Drive Grip is designed for simple, no nonsense auto film winding. A lithium battery to supply power helps keep weight and size at a minimum.

A E Prism Finder – This TTL aperture priority A E Prism Finder is equipped with Mamiya's original three - way metering. This offers a selection between average and spot as well as its own special auto (A/S) function that switches between spot and average automatically to suit the shooting conditions.

The 80mm f/2.8 Lens – This standard lens is a compact, lightweight focal length lens. It maintains the quality of Mamiya lenses, never compromising the reproduction of detail, colour fidelity and eliminating optical flaws. Applications include general purpose photography from landscapes to portraits and close up photography with bellows or extension tubes.
