

# MAMIYA RZ67 PRO IID

The Mamiya RZ67 series has become the industries standard used by many of today's most renowned photographers and artists. In response to requests from these professional photographers, the RZ67 has integrated MSCE (Mamiya Serial Communication for External) as found on the popular 645 AFD. The MSCE feature allows a means of communication with digital backs. It is a complete system camera and still provides the same desirable and exclusive features as its predecessor including:

Revolving Back – The optical axis can be rotated simply for horizontal or vertical format with the masking frame in the finder.

Bellows Focusing – 46mm Rack and Pinion bellows focusing system assures pin point focusing over the widest possible range.

Intermediate Shutter Speed Settings – The shutter speed dial permits intermediate shutter speeds between 1/400 and 4 sec, allowing even more precise exposure control without changing aperture settings or affecting the depth of field.

Interchangeable Lenses – Manufactured using the latest optical glass and coating technologies, interchangeable lenses for the RZ67 PRO IID include wide angle, standard, telephoto, fisheye, shift, macro and zoom.

Interchangeable Film Holders – As well as a wide range of digital backs the RZ67 PRO IID accepts the complete range of 120/220 roll film backs for the 6x4.5cm formats and Polaroid pack film holders.

Interchangeable Finders and Focusing Screens – The optional eye – level AE prism finder offers three way metering (average, spot or auto shift) and computerised, aperture – priority shutter control.

The RZ67 PRO IID has also inherited ergonomic design, electronic Flash synchronisation, large focusing knob with additional fine focus feature, mechanical interlocks, interchangeable finders and focusing screens, interchangeable power winder and electronic interface.

This camera can communicate untethered with the MSCE compatible digital backs. Through the MSCE system, the RZ67 Pro IID and the digital back communicate functions such as:

1. Shutter speed.
2. Release of shutter.
3. Status of the camera body and the attached digital back.
4. ISO sensitivity.
5. Number of images that can be sorted in the remaining capacity.

These features ensure that the RB67 PRO IID is the most versatile, reliable and desirable camera for sophisticated and demanding professional photographer.

The RZ-67 Pro IID will be available during August 2004.

RZ-67 Pro IID body only - £1299 including vat and £1105.53 excluding vat

RZ-67 Pro IID SV Kit - £2399 including vat and £2041.70 excluding vat
